EDUCATION

Northeastern University, Khoury College of Computer Sciences — **Boston, MA**
Master of Science in Computer Science, GPA 3.6/4.0 — **May 2026**

Dayananda Sagar University — **Bangalore, India**
Bachelor of Technology in Computer Science, GPA 3.7/4.0 — **June 2024**

TECHNICAL SKILLS

Languages: Python, SQL, Java, JavaScript
Data Engineering: Airflow, dbt, Spark Structured Streaming, Kafka, Debezium (CDC), Delta Lake, Trino
Modeling and Quality: Dimensional modeling, star schema, SCD Type 2, incremental models, Great Expectations
Databases and BI: PostgreSQL, MySQL, MongoDB, Redis, TimescaleDB, DuckDB, Power BI, Tableau
Cloud and Infrastructure: AWS (S3, EC2, Lambda, ECS, IAM), Terraform, Docker, Kubernetes, GitHub Actions

EXPERIENCE

Trainee Associate, Software Engineering | ITDR, Inc. | **Remote** — **Aug 2026 - Present**
- Completed technical onboarding on **SDLC** methodology, **Git** workflows, and environment standards.

Research Apprentice (Part-time) | National Institute of Advanced Studies | **Bangalore, India** — **Jul 2023 - Jun 2024**
- Built an end-to-end geospatial **data pipeline** in **Python** processing 15GB of satellite imagery through cleaning, feature extraction, and multi-class labeling.
- Parallelized preprocessing across 8 CPU cores to cut runtime roughly 25%, using **QGIS** for validation. Results fed Bangalore STRR Phase I planning and were published at **IEEE ASIANCON 2024**.

Software Engineering Intern | Mekhalyn Consulting | **Bangalore, India** — **Jan 2024 - May 2024**
- Added **composite indexes** and rewrote slow queries on **SQL Server** tables over 500K rows, cutting slow query count roughly 40% and API response time about 20%.
- Set up **GitHub Actions** CI/CD, taking the feature delivery cycle from about three weeks to under two days.

AI Engineering Intern | Vitesco Technologies | **Bangalore, India** — **Sep 2023 - Dec 2023**
- Built modular **Python ETL** pipelines over roughly 200K records covering cleaning, transformation, and feature engineering, feeding a classifier that reached about 85% accuracy.
- Profiled the pipeline and replaced row-wise loops with vectorized **NumPy**, cutting runtime around 17%.
- Automated **Power BI** dashboard refreshes off live pipelines, removing about six hours a week of manual data prep.

PROJECTS

Tideline, CDC Streaming Lakehouse | github.com/SmritiReddyy/tideline — **Aug 2026 - Present**
Python, PostgreSQL, Debezium, Kafka, Spark Structured Streaming, Delta Lake, Trino
- Built a **change-data-capture** pipeline moving Postgres writes through **Debezium** and Kafka into **Delta Lake** via **Spark Structured Streaming**, with composite-key merge logic to collapse duplicate events.
- Verified **exactly-once** delivery by restarting mid-stream and replaying the **Kafka** backlog with no drift.
- Handled **schema evolution** with no downtime, backfilling a new column without restarting the stream.
- Cut small-file count from roughly 180 to 8 via **compaction**, improving query latency through **Trino**.

Lodestar, ELT Analytics Platform | github.com/SmritiReddyy/lodestar — **Jul 2026 - Sep 2026**
Python, Airflow, dbt, Terraform, Great Expectations, Parquet, DuckDB
- Built an **Airflow**, **dbt**, and **Terraform** ELT pipeline loading roughly 100K orders (about 600K rows) from CSV into a partitioned Parquet lake, with **idempotent** daily loads that stay clean on re-run.
- Modeled a **star schema** in **dbt** across fact and dimension tables, with tests on every model.
- Added **SCD Type 2** versioning for seller address changes and **Great Expectations** checks on the raw layer.
- Orchestrated with two **Airflow DAGs**; tuned **incremental models** to run about twice as fast as full refresh.

Argus, Streaming Metrics Pipeline | github.com/SmritiReddyy/Argus — **Feb 2026 - Jun 2026**
Python, Kafka, Spark Structured Streaming, TimescaleDB, Elasticsearch, MLflow
- Built a streaming ingestion pipeline pulling logs, metrics, and traces from 3 services through **Kafka** into **Spark Structured Streaming**, computing **10-second windowed p50/p95/p99** aggregations.
- Landed aggregates in **TimescaleDB** for time-series queries and **Elasticsearch** for log search.
- Scheduled automated retraining of anomaly models with **MLflow** tracking model versions and **drift**.
